

Focal unveils its FOCAL[®]INSIDE range for Harley-Davidson!

Having created premium hi-fi systems for the car, the French specialist audio manufacturer is now developing its Focal Inside range. Covering over 20 manufacturers (BMW, Peugeot, Renault, Toyota, Volkswagen, ...) and compatible with nearly 300 vehicles, the range even extends to motorbikes! This is a world first for Focal. Renowned worldwide for the quality of its speaker drivers, the brand now reveals its dedicated **Harley-Davidson kits**.

THE NEW HARLEY-DAVIDSON KITS

The engineers at Focal have developed a brand new range of four 2-way component kits dedicated to motorbikes made by the iconic American manufacturer. The speaker drivers are equipped with the Access cone or made in France K2 Power cone, a Focal exclusive with exceptional sound rendering and with a yellow iconic color.

As this Focal Inside solution has been devised and developed for motorbikes travelling in a very noisy outdoor environment, for the first time Focal has developed the compression tweeter for high power and sound definition with no directionality. The result is a compressed Aluminium inverted dome tweeter for the Access speaker driver, and an 'M'-shaped inverted dome for the K2 Power speaker driver. The kits also include special bespoke Harley-Davidson grilles for perfect integration in the factory location.

Available: November 2019

THE FOCAL INSIDE CONCEPT: « ONE CAR, ONE AUDIO SOLUTION »

Focal Inside is an audio range aimed at any driver who wishes to replace their original system with a quality hand-picked solution. The Focal Inside kits are showcased on the website www.focal-inside.com so that each driver can select their audio system according to their vehicle model and exact requirements.

In addition, tutorial videos are available online in order to guide the client in his installation. Each kit is complete, which means it is available with all the mounting accessories necessary for installation.
